

GIVE Hope CHANGE Lives

Alexis was born extremely premature at 26 weeks of gestation with Chronic Lung Disease of Prematurity and Pulmonary Hypertension. Breathing equipment such as the ventilator and oxygen concentrator were critical as her underdeveloped lungs were unable to generate sufficient oxygen.

Thanks to the support of donors, Alexis benefitted from the free specialised equipment loans that enabled her parents to bring her home sooner and continue with the use of breathing machines for over three months after her discharge.

"We are grateful for the support received which helped ease our financial stress as we transited to a single income family due to Alexis' medical condition. We feel blessed to be able to spend every waking moment with her and are elated to watch her thrive and grow stronger each day."

- Alexis' Parents
